

Oracle Fusion Applications Ecosystem

with GUUT InfoApps — Distributed & Interactive Insight Layer

InfoApps complement Fusion's KPIs & Dashboards by extending insights to customers, partners & executives at scale

From Analytics to Outcomes

BI Stays Upstream — InfoApps Delivers the Last Mile

Traditional BI Ownership

- Metrics definition
- Semantic models
- Data governance
- Drill-down logic

InfoApps Continues

- Customer distribution
- Data portability
- Offline access
- Decision enablement

Shared Benefits

- Same data, wider reach
- Reduced portal costs
- Better user experience
- Clear ROI on analytics

The Handoff Point

InfoApps don't compete with BI — they finish the job dashboards were never designed to do. BI creates the insight. InfoApps deliver it to the people who need it, when and where they need it.

What InfoApps Replace — And Why

One Solution for Multiple Legacy Approaches

Static PDFs

Problems:

- No interactivity
- No exploration
- One view, frozen in time
- Manual updates required
- Can't drill down
- Not machine-readable

Why Replace:

Data trapped in pages

Power BI + Excel

Problems:

- Portal-dependent
- Online-only access
- Expensive compute per query
- Manual Excel exports
- Version control chaos
- **No offline capability**

Why Replace:

Distribution bottleneck

Tableau

Problems:

- Server-side rendering
- Per-user licensing costs
- **Can't share externally**
- Requires VPN/login
- Heavy infrastructure
- **Not portable**

Why Replace:

Built for analysts, not customers

InfoApps Replace All Three

Interactive • Portable • Offline-Capable • Cost-Predictable • Customer-Ready • Machine-Readable
